Case study title

Kousic Srinivasan

Google

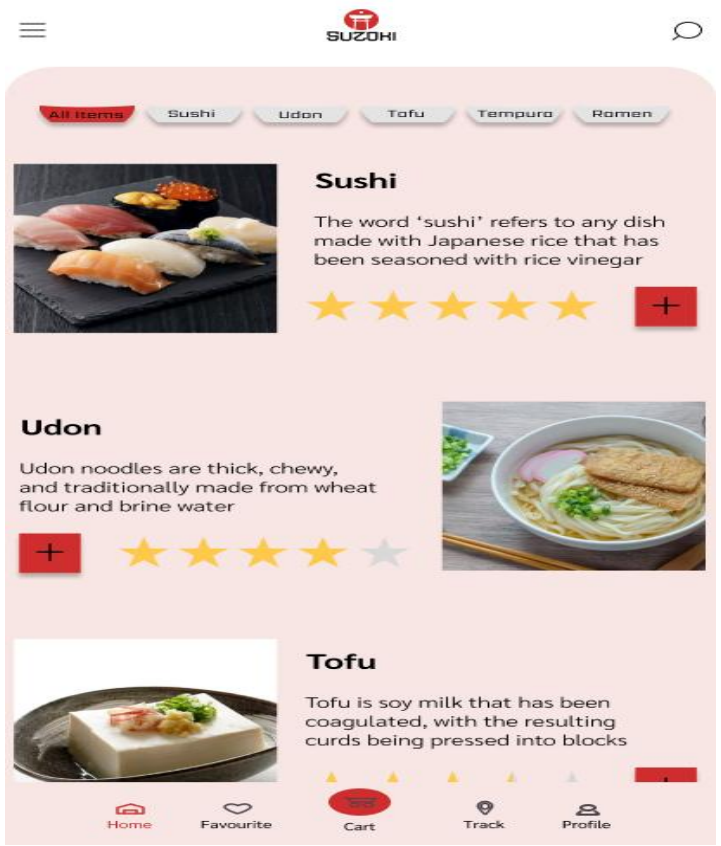

Project overview

The product:

Food customization app called "Suzoki" for Japanese restaurant. The state of some common problem and their possible solution for the app so that users could easily customize food orders of their own choices.

Project duration:

It took me 2 weeks to make this unique, trendy, and user-friendly design.

Google

Project overview

The problem:

My ideal customer is a man named Kodama. Kodama is in their mid 20’s and lives with friends. They are a high school graduate and work in a small team. Kodama lives in Japan, he wants to eat food of his own choices and spend less time while selecting food on less budget

Needs: Customize food of his own choices. Spend less time on food choices. Gets food on low budget

The goal:

Our food customization app will let users customize food ingredients which will affect students and working adults who wants to select and customize food of their own choices by spending less time on food choices and budget-friendly. We will measure effectiveness by tracking user engagement with the app based on no.of orders placed within a week

Google

Project overview

My role:

UX Designer responsible for the app’s design

Responsibilities:

My responsibilities include User research, creating high-fidelity mockups, information architecture and prototyping

Google

Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

User research: summary

I conducted interviews with people I considered to be prospective users of the app and created empathy maps afterwards. I identified user pain points and created user personas based on the interviews.

Going into the research, I assumed the users that would need the app were young working adults, but in the course of the research, it was discovered students and even "non-working" adults felt a need for an easy-to-use food app that has lot of customization features of their own liking.

Google

User research: pain points

1

Pain point

Lack of customization options for customers to their own liking

2

Pain point

Foods are not fresh sometimes becomes tasteless and unhealthy

3

Pain point

Exact foods are not delivered and food images mismatch

4

Pain point

Users get frustrated for waiting while ordering from long list of menu items

Google

Persona: **Kodama**

Name **Kodama**

Age: 25
Education: High school student
Hometown: Hiroshima City
Family: Staying with friends
Occupation: Marketing Agent

"No distance of place or lapse of time can lessen the friendship of those who are thoroughly persuaded of each other's worth."

Problem statement:

Kodama is in their mid 20's and lives with friends. They are a high school graduate and work in a small team. Kodama lives in Japan, he wants to eat food on his own choices and spend less time while selecting food on less budget

Goals

- Variety of menu items
- Good menu selection
- Delivery in large quantities
- Time saving

Frustrations

- Lack of time searching for particular cuisine
- Have to look for food customizations in different sources

Kodama works as a Marketing agent for a Kojima Shindoji company in Hiroshima city, Honshu Island. Leads a healthy lifestyle but sometimes there is no time for a full-fledged lunch, ordering quick snacks saves the day

Google

User journey map

Added customize food ingredients so that it'll be easy for him to select based on his liking

ACTION	App Install	Searching menu	Order checkout	Payment	Order received
TASK LIST	• Install app • Open app • Allow location access permission	• Searching menu that he wants to order • Select and customize food • Add to cart	• Checkout cost • Verifying final total cost of order	• Choosing payment method • Placed order	• Waiting for order Confirming address location • Received order
FEELING ADJECTIVE	• Feels like neat, accessible and interactive • Love to find more food item	• Enjoys customizing food option • Positive about Availability of different options	• Feels disappointed with the cost • Excited to have cost-free side dish	• Happy with smooth payment process	• Eagerly waiting to receive order • Feels nervous about delay
IMPROVEMENT OPPORTUNITIES	• Login setup via Google account or mobile • Discount offerings based on number of items placed	• Dynamic navigation menu for finding food • More ingredients added with options	• Revamped costing for every items in the list • Added final total cost for all the fillings and toppings	• Added UPI payment, cash on delivery method and Amazon pay method for seamless transition	• Location tracker to track real-time order transition • Added help option for customer support in case of any user complaints on order

Starting the design

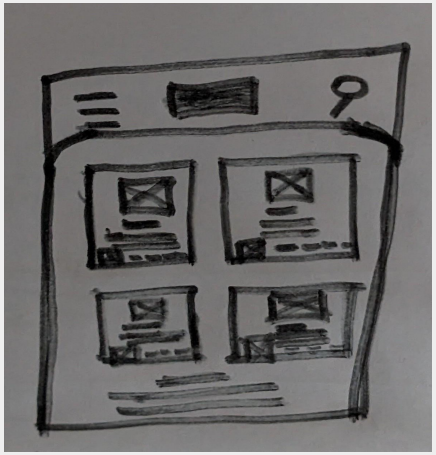

- Paper wireframes
- Digital wireframes
- Low-fidelity prototype
- Usability studies

Paper wireframes

[Your notes about goals and thought process]

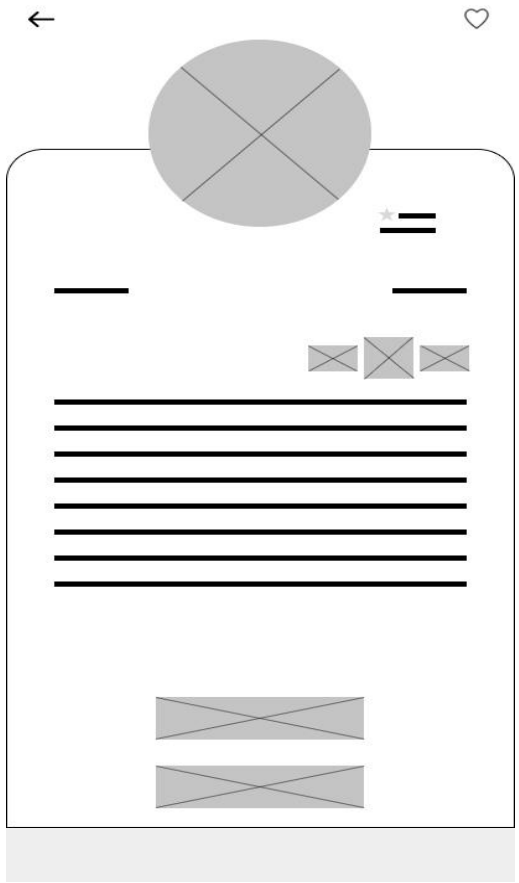

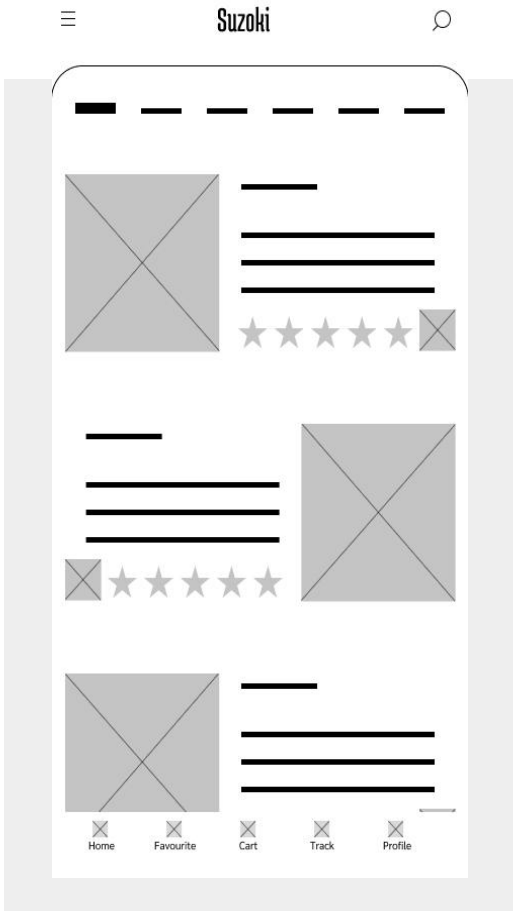

Digital wireframes

[Your notes about goals and thought process]

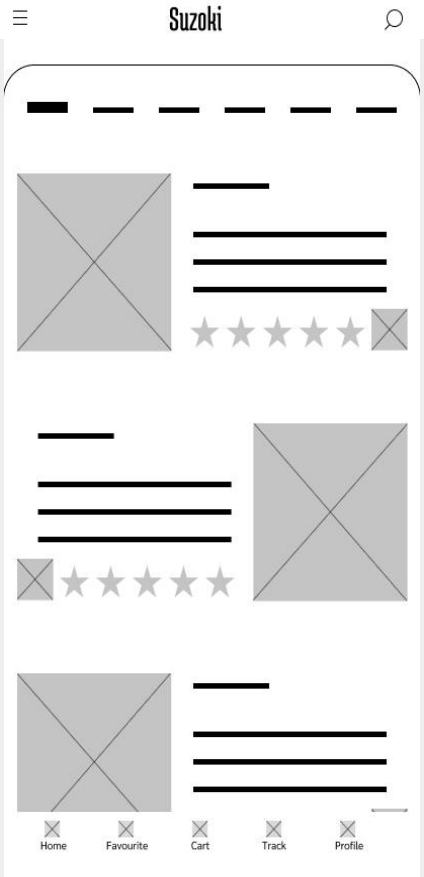

Digital wireframes

[Your notes about goals and thought process]

Low-fidelity prototype

https://www.figma.com/proto/eXS2PGRh8YV0npNgeKcw3e/Figma-designs?page-id=223%3A184&type=design&node-id=1066-623&viewport=351%2C266%2C0.13&t=MdRhasnNcMKTOar0-1&scaling=scale-down&starting-point-node-id=1066%3A623&show-proto-sidebar=1&mode=design

Usability study: findings

Write a short introduction to the usability studies you conducted and your findings.

Round 1 findings

1. To get an early insight into the app's usability before the introduction of visual elements, I recruited 2 participants to test the app
2. By watching the participants interact with the app and hearing their thoughts, I was able to identify problem areas in the app's design. The results were noted down and an affinity diagram was used to identify patterns.
3. Insert finding

Round 2 findings

1. Insert finding
2. Insert finding
3. Insert finding

Google

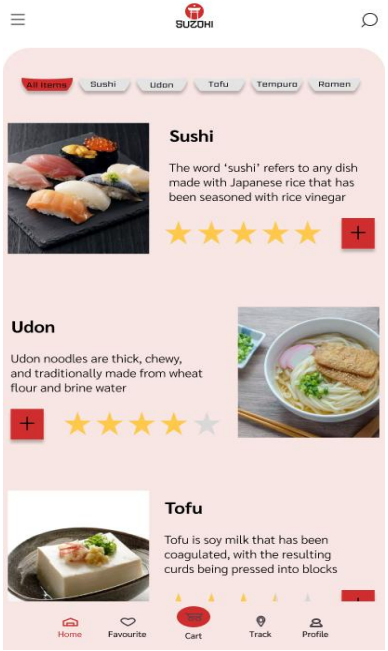

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

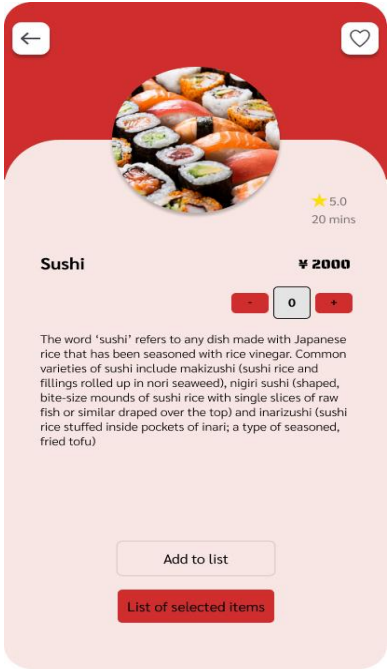

Mockups

My goal is to provide best possible way to give users useful, enjoyable, usable product that puts user first approach as a thought process.

Before usability study

After usability study

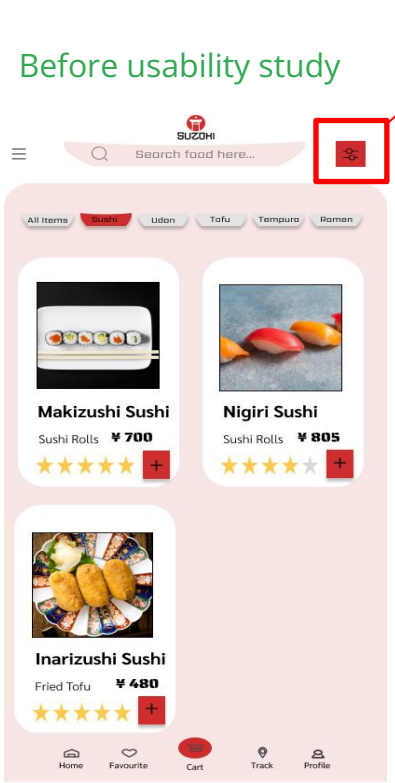

Google

Mockups

Users may find it useful of customization options with visually pleasing and more varieties

High-fidelity prototype

https://www.figma.com/proto/eXS2PGRh8YV0npNgeKcw3e/Figma-designs?embed_host=share&kind=&node-id=232-195&page-id=223%3A184&scaling=scale-down&starting-point-node-id=232%3A195&t=ma0XHmAlpeKYIJDC-1&type=design&viewport=297%2C132%2C0.13

Accessibility considerations

1

To ensure compatibility with assistive technology such as screen readers, I included image descriptions and used appropriate hierarchy and emphasis throughout the design

2

High contrasting colours were used to make it easy to differentiate between elements

Google

Going forward

- Takeaways
- Next steps

Google

Takeaways

Impact:

Testing a product with real users helps give a new perspective on things: Through my usability studies, I was reminded that each individual is unique.

What I learned:

So the best way to learn about the usability of a product is by testing it with different people

Next steps

1

The next step would be to conduct another round of usability studies with a wider range of participants, to determine whether the current solution effectively addresses the users' pain points

Google

Let’s connect!

Hello there! 👋
I'm Kousic Srinivasan, a User Interface designer, Gamer and Editor
Recently, I tried to pursue a career in User Experience design by practicing on design tools such as Figma and also having an hands-on experience in coding such as HTML, CSS, JS and React. I got motivated by the desire to create new designs that solve complex real world problems. I am always a firm believer on User first approach that a good design should be useful, enjoyable and accessible to every users regardless of ability, race, economic status, language, age, and gender.
I think the program is great for beginners looking to start a career in UX Design. The tutorials are well explained and easy to follow. I fully recommend it for anyone who wants to pursue their career in UX design!
