Case study title

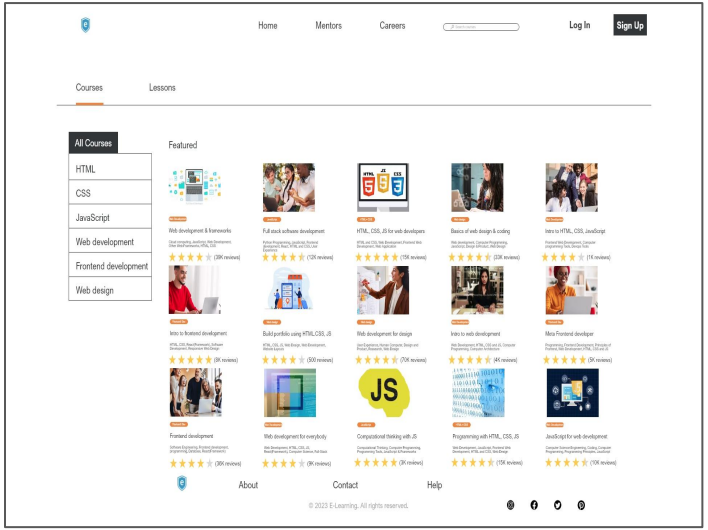

Kousic Srinivasan

Google

Project overview

The product:

Online E-learning platform for teenagers holds a range of in-person courses and workshops at various locations.

Project duration:

The task took around 3 weeks to complete to design an online solution for workshop camp

Google

Project overview

The problem:

Online E-learning platform for teenagers holds a range of in-person courses and workshops at various locations. However, many teenagers are unable to attend the workshop camp due to time and cost reasons, but still want to take part in a course.

The goal:

Our E-learning platform will let teenagers a way to provide an engaging online experience which will affect students who cannot attend the workshop camp. We will measure effectiveness by tracking user engagement via no.of users signed in per week

Google

Project overview

My role:

UX Designer responsible for designing online solution for workshop camp

Responsibilities:

My responsibilities include User research, creating high-fidelity mockups, information architecture and prototyping

Google

Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

User research: summary

I conducted interviews with people I considered to be prospective users of the app and created empathy maps afterwards. I identified user pain points and created user personas based on the interviews.

Going into the research, I assumed the users who are curious to learn coding are teenagers, but in the course of the research,it was discovered that 70% of participants said they were interested in online workshop to get a hands-on practice while learning online course.

Google

User research: pain points

1

Pain point

Boring Contents and less engaging

2

Pain point

Clear explanations and guidance

3

Pain point

A public student card profile

4

Pain point

Ratings and reviews for all the courses

Google

Persona: **Darren**

Problem statement:

Darren Conner is a teenager who is 15-year-old boy living in Birmingham who wants to learn to code who needs help to get started using online learning platform

Name **Darren Conner**

Age: 15
Education: Student
Hometown: Birmingham, USA
Family: Living with Parents
Occupation: High School Student

"I Would like to learn to code while having engaging conversation with my friends."

Goals

- Wants to learn how to code
- Need an engaging conversation with friends while learning

Frustrations

- Less engaging and boring contents
- Parents can't afford to send him to live workshops

Darren is a curious and motivated teenager who enjoys learning. His hobbies includes playing soccer, online games and chatting with friends

Google

User journey map

To help structure the solution, user taking coding lessons while also getting assistance from his/her friends

ACTION	Login	Searching for lessons	Selects the video to start	Video plays	Selects chat with friends
TASK LIST	• Open E-learning platform • User login	• Navigate to lessons section • Searching for the already enrolled course	• Select the course content • Select the video where he/she left off	• Start the video • Turn on the subtitles	• Click the Chat with friends button • Select the profile or name of the friend to start a conversation
FEELING ADJECTIVE	• Feels bored • Goes online • Talks with friends online who are on same bootcamp	• Decided to learn how to code • Going to youtube • Feels overwhelmed	• Watched for 5 mins before getting bored • Got frustrated	• Stops the video • Decided to talk with friends online	• Talks with friends via chat online • Needs help from the mentors
IMPROVEMENT OPPORTUNITIES	• Login with student profile card	• Clear path to easily find videos • Make recommended videos appear at the top of the page	• Making videos in a more fun and engaging way • Added chat with friends feature	• Also added help button to ask the community in case of any queries on specific topics	• Users can engage in chat with friends while watching videos

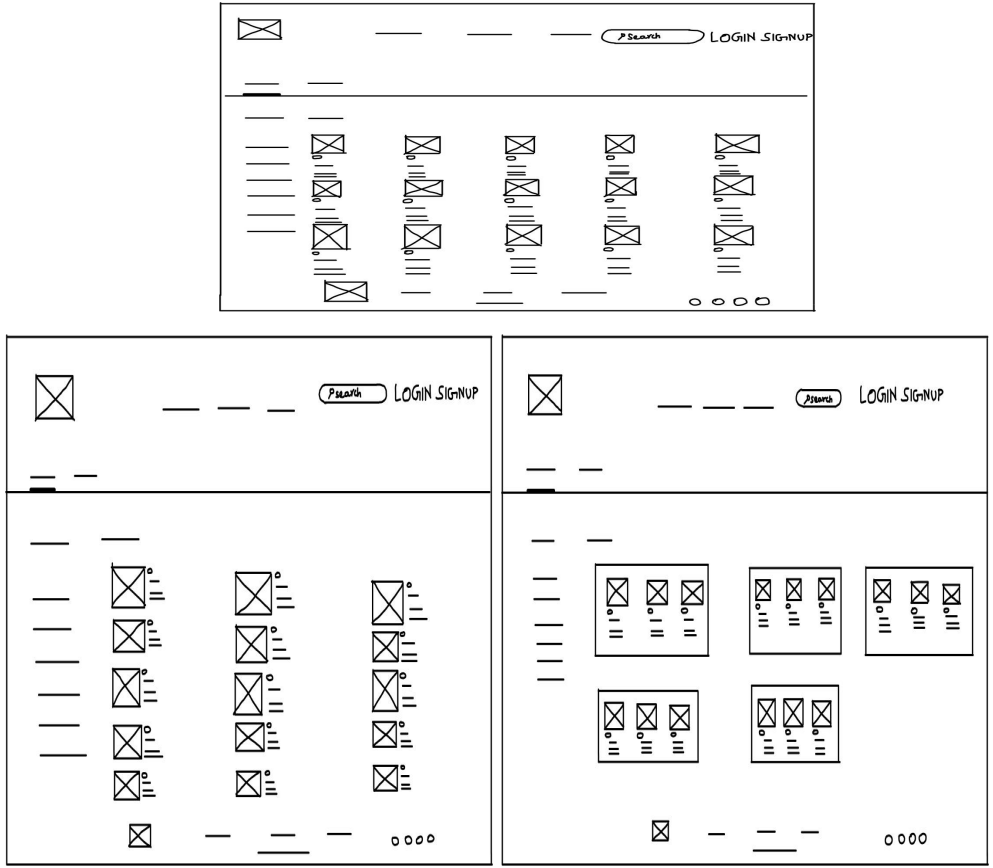

Google

Starting the design

- Paper wireframes
- Digital wireframes
- Low-fidelity prototype
- Usability studies

Paper wireframes

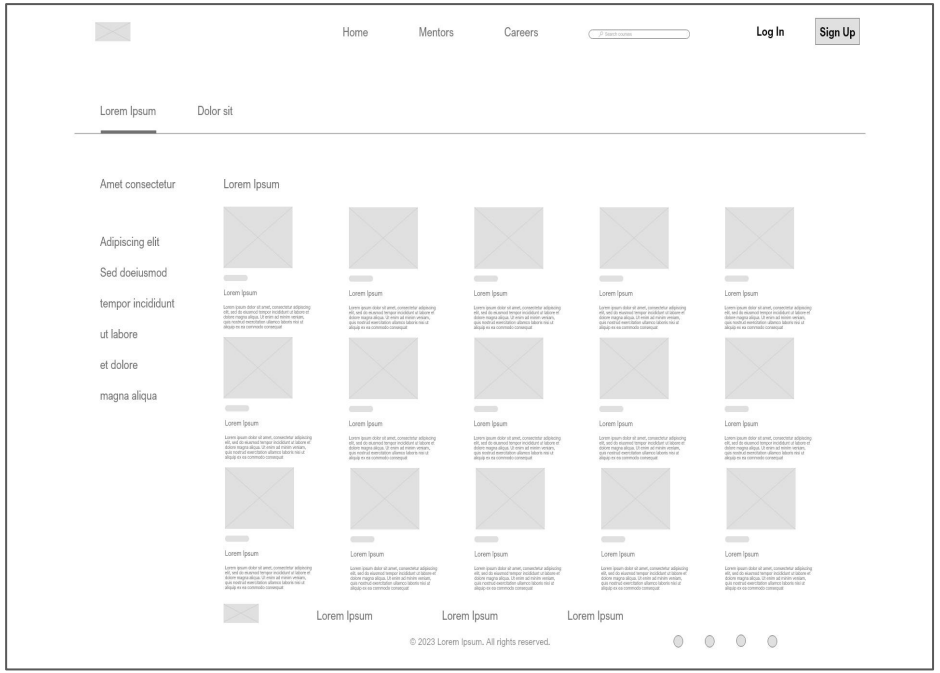

Preferred first design model
to make it more accessible
and also easy to navigate

Google

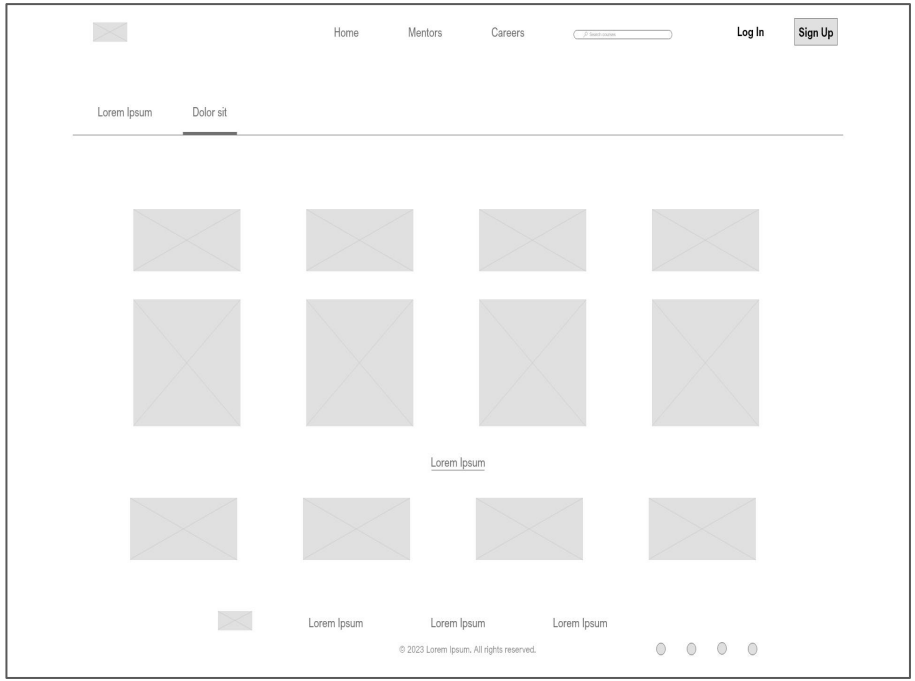

Digital wireframes

Clear explanations at the start of the lessons

Digital wireframes

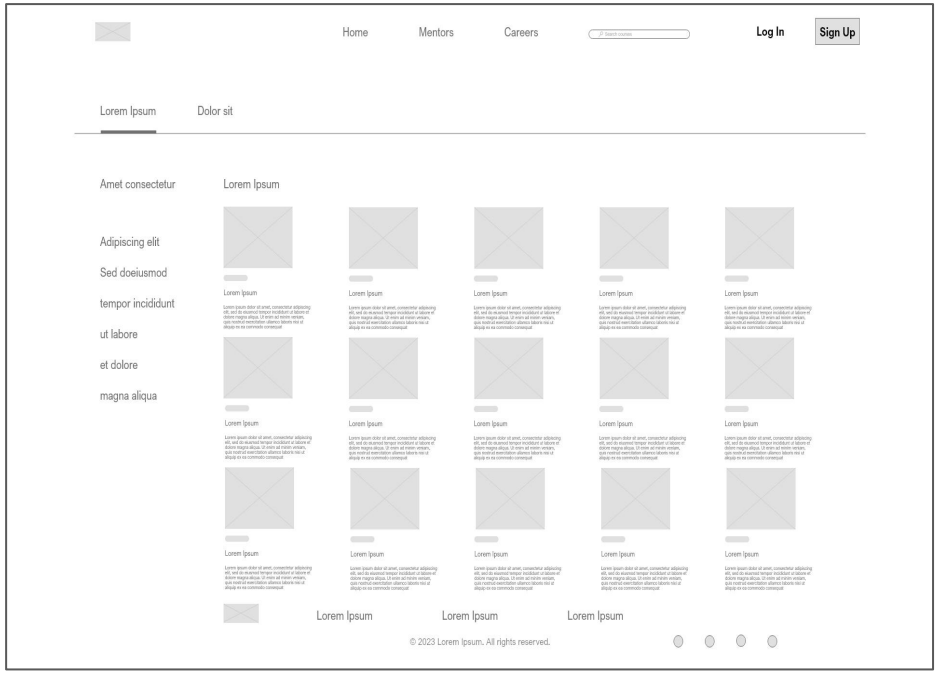

A public ID for student profile card

Google

Low-fidelity prototype

Online E-learning Platform

Usability study: findings

Write a short introduction to the usability studies you conducted and your findings.

Round 1 findings

1. Self-motivation is the key to keeping their attention. Teenagers need to be engaged by subjects that they are interested in and be given the tools and guidance to do well and continue to succeed

2. 70% of survey participants said they were interested in learning about technology online

3. Although teenagers felt they could concentrate better while studying alone, getting feedback from other motivated teenagers, helped with their learning.

Google

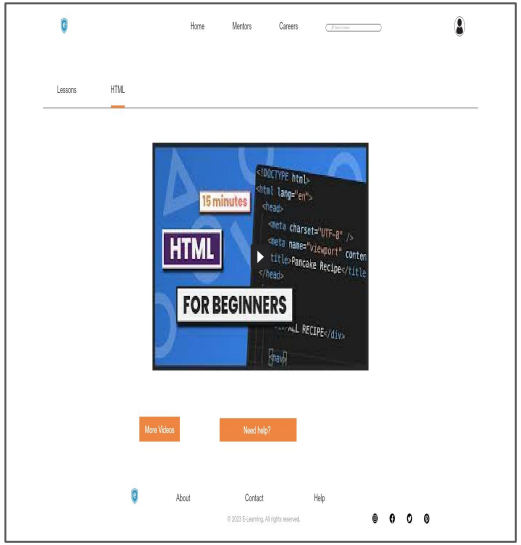

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

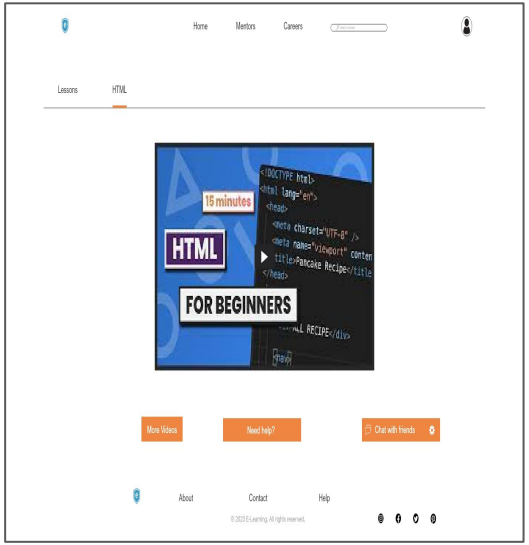

Mockups

Users can engage in chat with friends while watching videos

Before usability study

After usability study

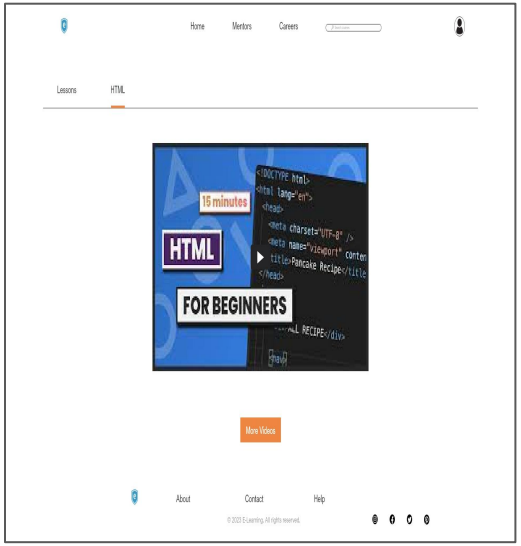

Google

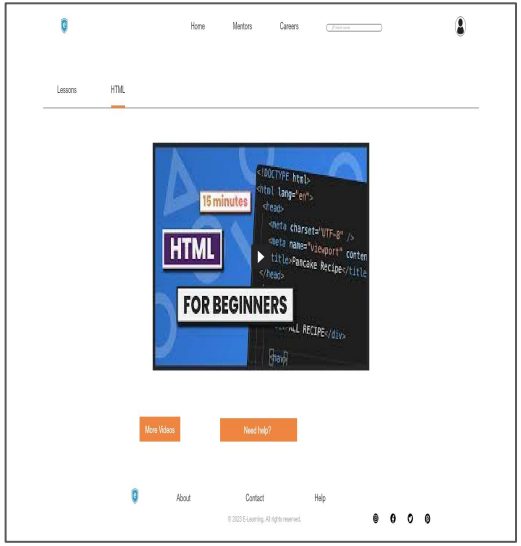

Mockups

Added help button to ask the community in case of any queries on specific topics

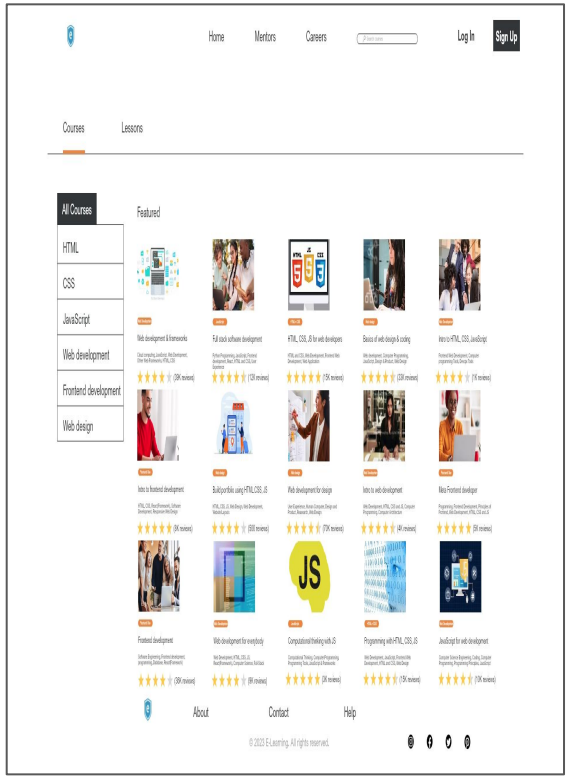

Before usability study

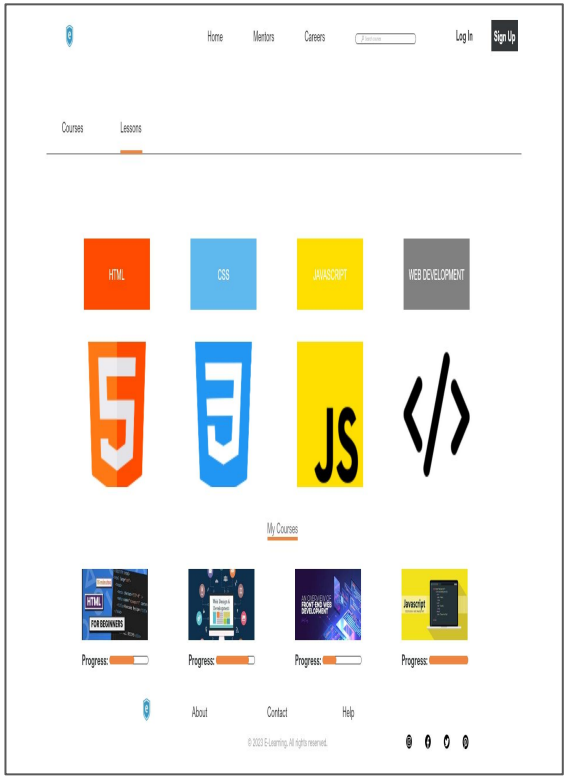

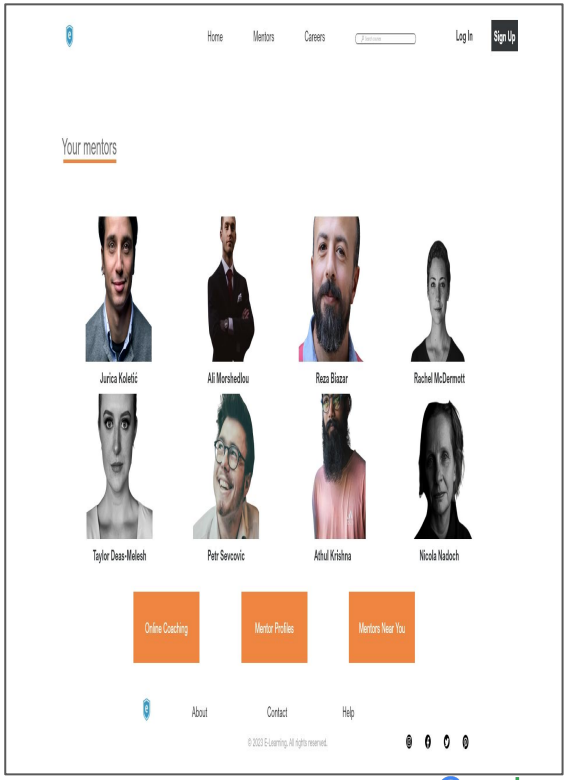

After usability study

High-fidelity prototype

[Online E-Learning Platform]

Accessibility considerations

1

To ensure compatibility with assistive technology such as screen readers I included image descriptions and used appropriate hierarchy and emphasis throughout the designs

2

Large font size were used to make it more easy to read text

3

Also added closed captions for each videos in order to ensure that the users don’t lose their trail on the contents by focusing on other things while watching videos

Google

Going forward

- Takeaways
- Next steps

Google

Takeaways

Impact:

Testing a product with real users helped me to find a new perspective on things. Through my usability studies, I was reminded that the teenage students need more peer encouragement in order to pursue it as a career.

What I learned:

This was the first time I had conducted user research with a restricted age group, and as I found, interviewing teenagers required a bit more effort. Most were not as communicative as the adults I had interviewed for previous projects, therefore I had to be more persistent with interview questions, to get them to open up.

Next steps

1

The next step would be to conduct another round of usability studies with a wider range of participants, to determine whether the current solution effectively addresses the users' pain points

2

Due to the nature of the problem, the solution needed to be quite feature-rich. I still had a problem with featuritis, where I spent a lot of time fleshing out several features, when focusing on a just a few may have been a better use of the time I had.

Google

Let’s connect!

Hello there! 👋
I'm Kousic Srinivasan, a User Interface designer, Gamer and Editor
Recently, I tried to pursue a career in User Experience design by practicing on design tools such as Figma and also having an hands-on experience in coding such as HTML, CSS, JS and React. I got motivated by the desire to create new designs that solve complex real world problems. I am always a firm believer on User first approach that a good design should be useful, enjoyable and accessible to every users regardless of ability, race, economic status, language, age, and gender.
I think the program is great for beginners looking to start a career in UX Design. The tutorials are well explained and easy to follow. I fully recommend it for anyone who wants to pursue their career in UX design!
